February 25, 2005

During the spring of 2004, The University of Southern Mississippi installed the Momentum 51 turf system in our marquee football venue M.M. Roberts Stadium. Nearly a year later, we are even more satisfied with the product than the day it was finished.

We studied the different turf system options available for about a year before making the decision on Momentum. The qualities that the Momentum product offered, including a denser face weight, sewn seams, natural appearance and exceptional graphic inlays, made our choice of products fairly easy.

I was very impressed, during the installation process, of the amount of detail work that Sportexe performed. The fact that every major seam was hand sewn impressed me most; not to mention the timeline of the project was met to the day, even with some unavoidable delays during the project. Though Momentum was competitively priced, it was not the lowest bid. But, we knew the qualities we were looking for from the beginning and we received all of them in this product.

In the past, in order to maintain a top quality NCAA Division I-A football playing surface, we had to greatly restrict the use of the field. During the past 10 months, we have had well over 100 activities on the field. During the next year we will invest millions of dollars in M.M. Roberts Stadium in the form of luxury suites, club seating, and additional general seating. This would not be practical without the ability to provide unlimited use of the stadium.

There are other quality products available, but I have no doubt that we chose the best product. It's difficult to prove this point in a letter. I invite anyone to visit us in Hattiesburg and I would be happy to show you first-hand.

Sincerely,

David P. Hansen
Sr. Associate Athletics Director
